

Repo Constitution — Local Listings & Guides (v1.1)

This document is the authoritative operating constitution for all Local Listings & Guides repositories, including The Accident Guides. It governs architecture, compliance, content, monetization, deployment, and scaling.

Core laws: no hallucination, no endorsements, no legal advice, no outcome guarantees. Content must be educational, plain-language, and compliance-forward.

Listings are data-driven via JSON only. HTML is immutable. Images are controlled via local assets for canonical cities and hotlinks for future cities.

Phoenix is the canonical reference implementation. Future cities may use Hotlink Mode until monetization.

All cities must follow the mandatory step-by-step deployment sequence and pass compliance and QA audits before deployment.
